Turner's Syndrome and Hearing What you need to know

Orla Jones, Chief Audiologist Hermitage Medical Clinic

What is an audiologist?

- Test hearing and balance in newborns, children and adults
- Examine ears and test for problems in the middle and inner ear
- Provide rehabilitation for people with hearing problems

Introduction

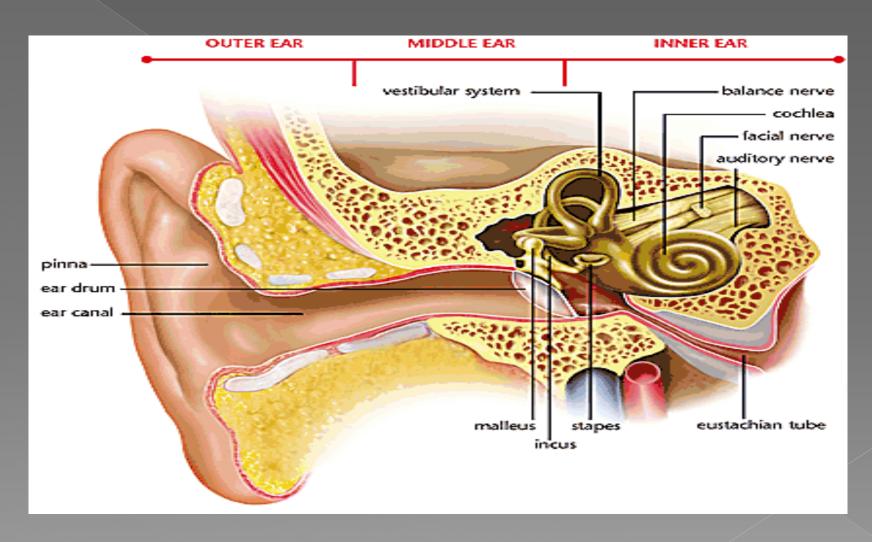

Hearing loss in children

Hearing loss in adults

The Ear

Hearing in children with TS

Lack of evidence on hearing levels in infants

- Studies on children aged 10-16
- 33-53% had conductive hearing loss
- 13-58% had sensorineural hearing loss

Large Variation in study results

Signs of hearing problems in a child

- Asking for things to be repeated especially when they are not facing the speaker
- Getting lost/accused of day dreaming at school
- Shouting or talking very quietly
- Sensitive to loud noises
- Speech problems
- Turning up TV
- Misunderstandings

What to do if you think your child has a hearing loss

- Speak to your GP
- Your child may need to be referred to an audiologist and/or Ear Nose and Throat Dept.
- Face child and get their attention before speaking to them,
- Speak a little slower and clearly
- Ask for child to be moved to front of class

Intervention

Medical/surgical

• Amplification

and most importantly

Monitor

Hearing in adults with TS

- 17% normal hearing
- 19% conductive hearing loss
- 47% sensorineural hearing loss

- Results based on adults over 16 year with TS

Signs of Hearing loss in Adults

- Needing things to be repeated
- Turning up TV or radio
- Finding that people mumble instead of talking
- Significant difficulty hearing when in background noise
- Tired in work, getting lost at meetings, lack of focus
